

Project Proposal

Project Title: Student Project Management Web Application

1. Organisation

King’s Own Institute

2. Contact Person

- Name: Sajad Ghatrehsamani
- Email: sajad.ghatrehsamani@koi.edu.au

3. Project Focus

Students will design and develop a web application that allows a university to manage student projects efficiently. The application should enable project submission from companies, project approval by staff, student selection, and tutor tracking - replacing traditional spreadsheet-based workflows.

4. Project Scope

- Develop a web-based system to manage student projects from submission to completion.
- Implement role-based access for Admin, Student, Tutor, and Company.
- Replace manual Excel/Google Sheet workflows with a secure, automated system.
- Track project approval, student assignment, tutor updates, and notifications.
- Ensure data security, especially for internal notes.

5. Requirements

Functional Requirements:

Feature	Description	Roles
Project Submission	Company can submit a project with title, description, and requirements.	Company
Project Approval	Admin reviews and approves projects before students can see them.	Admin
Project Selection	Students can view approved projects and select one.	Student
Tutor Assignment	Tutors are assigned to	Admin, Tutor

	projects/students and can update progress.	
Progress Tracking	Tutors can update progress; students can view feedback.	Tutor, Student
Dashboard	Visual overview of projects, student assignment, and completion status.	Admin, Tutor
Notifications	Send emails to students/tutors on project assignment or updates.	System (via Gmail integration)

6. Focus Area

- Role-based web application development
- Full-stack development (frontend + backend + database)
- User experience (UX) and responsive design
- Data security and privacy

7. Expected Outcome / Deliverables

1. Fully functional web application with frontend and backend.
2. Database schema and sample data.
3. Documentation: system design, installation guide, and user manual for Admin, Tutor, and Student roles.
4. Demo video showing main features.

8. Optional Extensions

- Analytics dashboard (charts for student assignment & project completion)
- Real-time notifications.
